Using Reltio Integration Hub to automate Reltio workflows

Dan Gage
Principal Solution Consultant
August 25, 2022

Reltio Integration Hub – Low Code / No Code automation

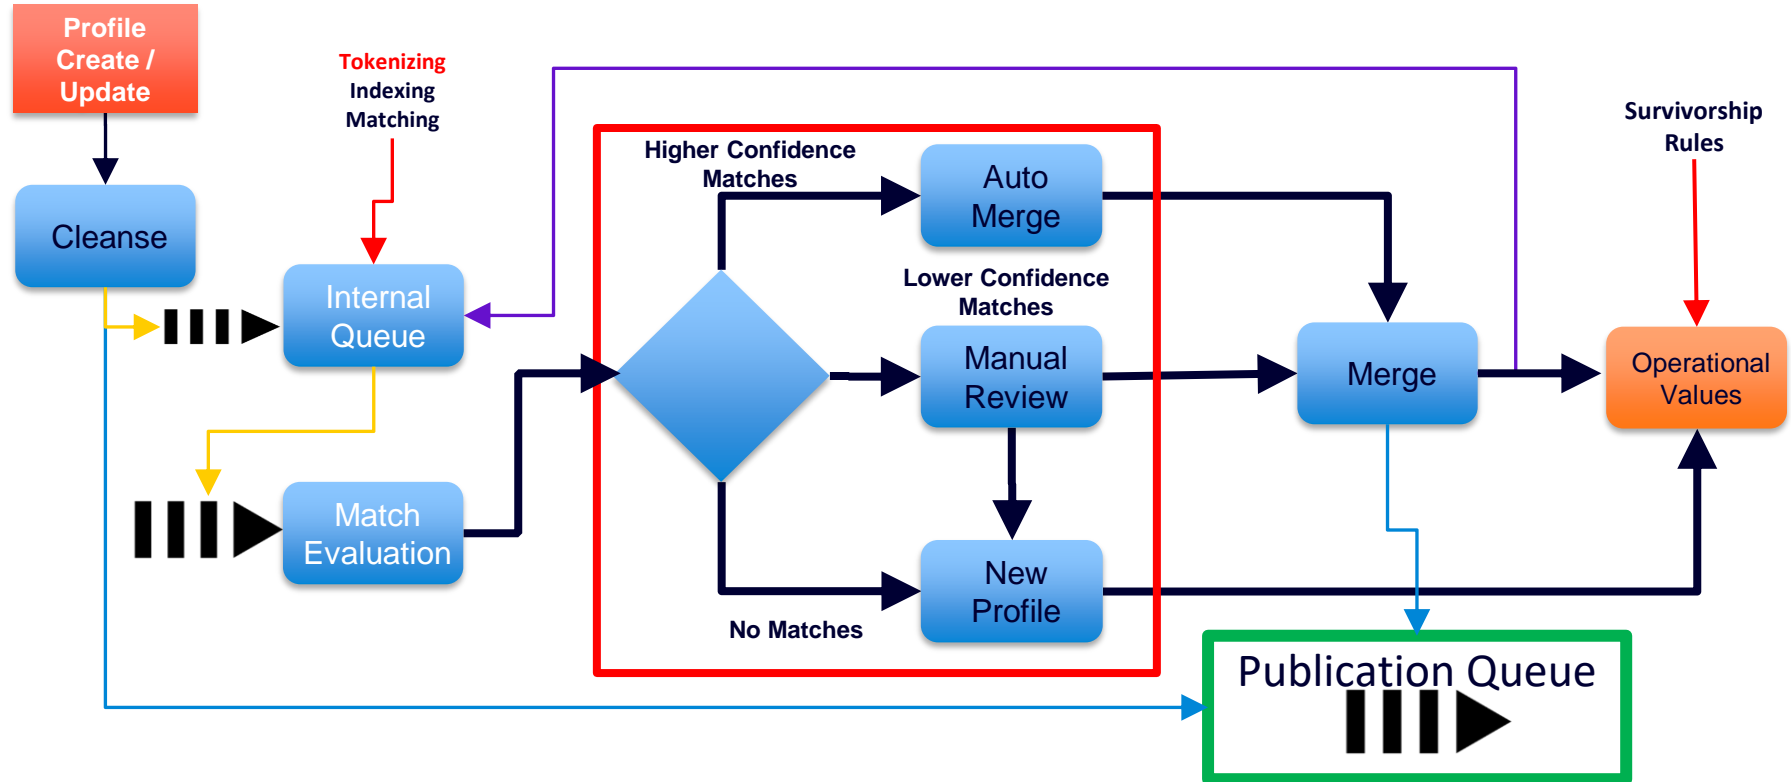

Reltio Workflow – user interactive review and approval interactive flows

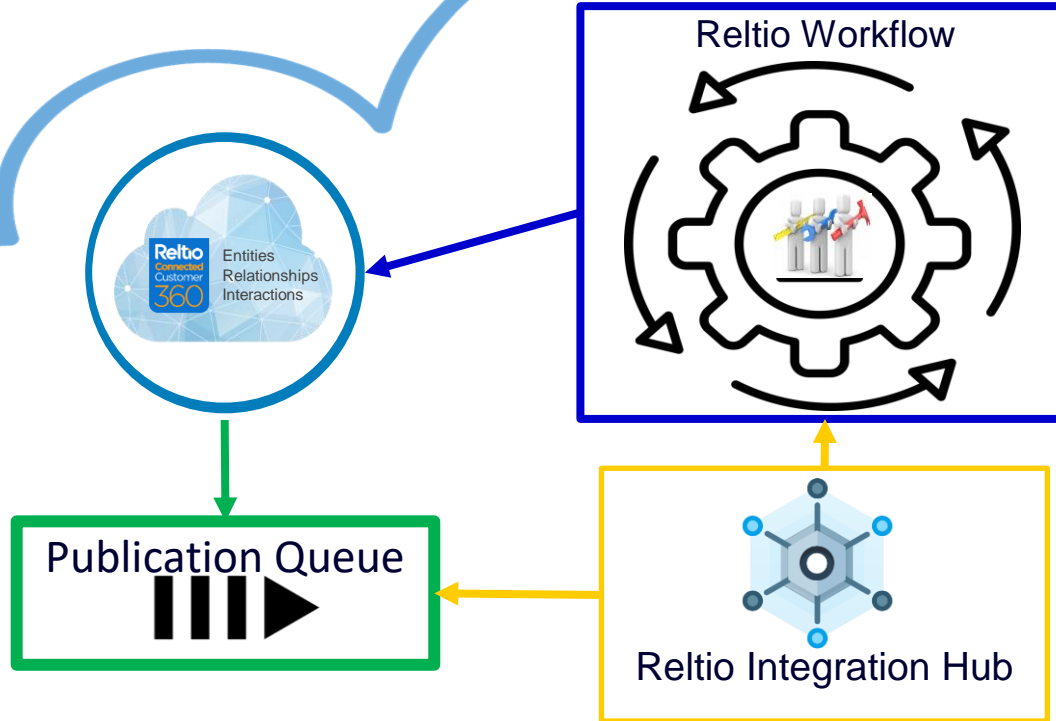

Reltio Event Streaming – Near Real-time notification of hub activities

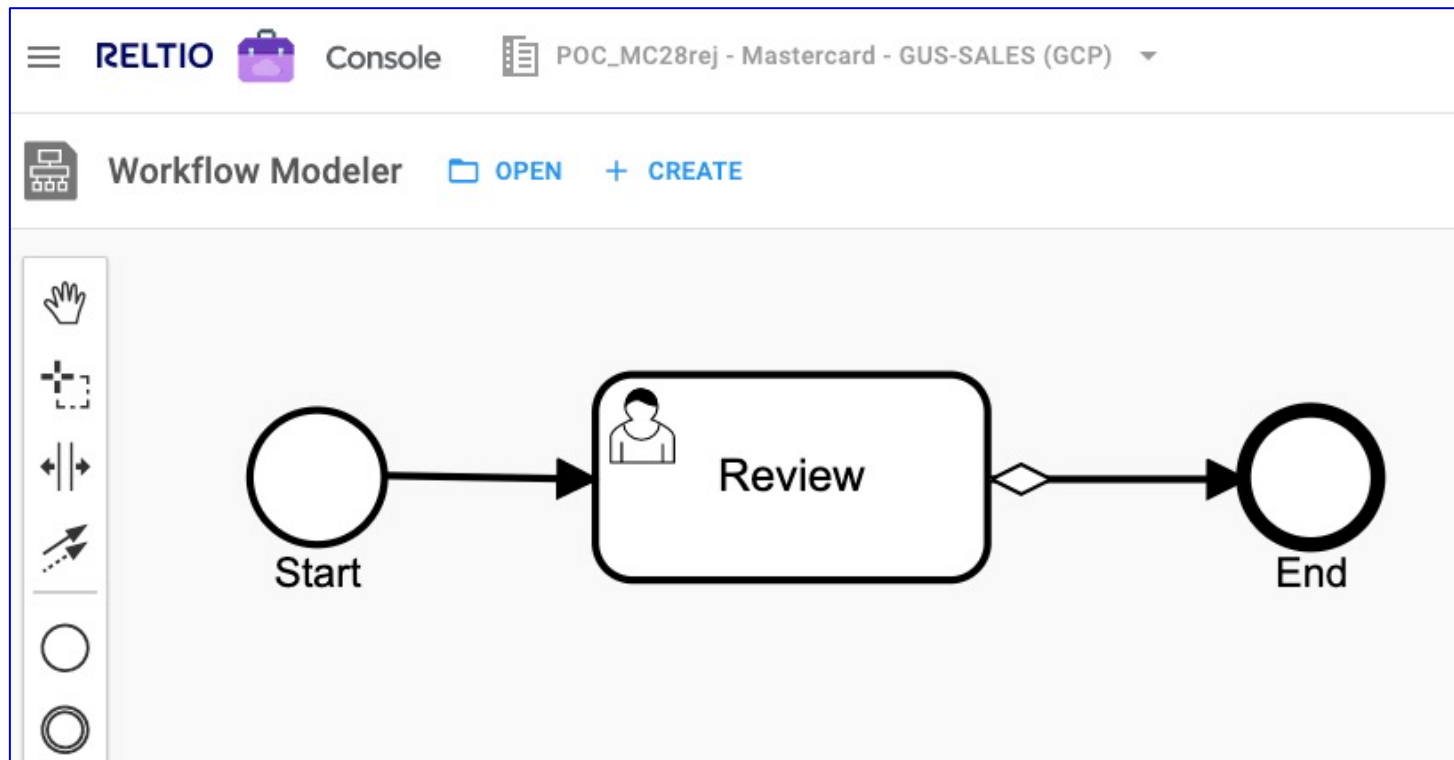

Data Management Lifecycle Process

Workflow automation via Reltio Integration Hub

Deploy a simple workflow

Define an External Queue to receive events

Reltio Customer Success can help or you can just submit a Support ticket

RELATIO

Console

POC_MC28rej - Mastercard - GUS-SALES (GCP)

Tenant Management

MONITORING

MANAGE

External queues - destination configuration

+ ADD CONFIGURATION

Configurations

1 item

Name/ARN
gus-sales_oTCh6PokfY4YEz2

Edit configuration

☐ Use ARN

When selected queue configuration will be using the ARN of your aws queue

Queue name *

gus-sales_oTCh6PokfY4YEz2

Type *

SQS

Region *

us-east-1

Format

JSON

Object filter

Type filter

Collection of event types name to stream. Events of different types will be ignored.

Payload type

Specifies the content payload type to your destination, which can be either Snapshot or Delta. Select Snapshot to add a partial snapshot of the data object to the streaming messages or Delta to add only information about the changed part of the object in a before-after format very similar to the activity log. For more details, please refer to the [Reltio Documentation Portal](#).

☒ Snapshot

☐ Snapshot

☐ Delta

All fields

Selected fields

☒ Enable streaming

When selected the messages will be streamed to the chosen queue destination.
